

FITTING THE GLASS SHADE

We recommend that you have two people to fit the glass shade, one person to hold the glass while the other attaches the gantry as described here:

1. Ensure the power supply is isolated at the consumer unit or fuse box.
2. Remove the shade ring from the bulb holder and set it aside.
3. Carefully thread the bulb holder through the top of the glass shade.
4. Then place the bulb holder into the porcelain gantry.
5. Thread the shade ring onto the bulb holder and screw on (do not over tighten).

You can use the shade ring tool if your fingers do not fit inside the gantry. Simple push the slotted end of the tool over the shade ring so that the shade ring sits snugly at the top of the inside lip of the tool.
